

Decentralized Meme Coins Community **ETF** Token

Whitepaper 1.0

Project Goals

GOAL of the **XMEME** project is to create a **decentralized ETF** on the Binance Smart Chain, providing investors with exposure to all new and existing meme coins, ensuring they don't miss out on the next **PEPE**, **SHIBA**, or **DOGE** Coin. The project aims to be a game-changer in the next crypto bull run, offering investors easy and convenient access to a wide range of meme coins.

How It Works?

The XMEME project will operate as **3 interdependent Smart Contracts** on **Binance Smart Chain**. The contract will be monitored by a team of algorithms that will automatically adjust the **ETF** composition to ensure the appropriate level of exposure to all new meme coins.

Tokenomics

Supply **21,000,000,000** burnable XMEME tokens

5% Airdrop with **8.5%** monthly vesting

15% Exchanges Liquidity

10% Launchpad

5% Crew

65% Presale + 3 Months **Staking/Buyback** campaign

Airdrop

5% token supply will be allocated for an **airdrop**, which will be released gradually over the course of the next year at a rate of **8.5%** per month (**vesting**). The airdrop will be directed towards individuals who have shown interest in the project, such as by following its social media or joining its community.

Dex Liquidity

15% XMEME supply will be allocated to provide **liquidity** on **decentralized exchanges**. Centralized exchanges will be able to list **XMEME** only if they acquire it from the market, which will have a positive impact on its price. These funds will be used to purchase **XMEME** tokens and deposit them on exchanges to ensure that tokens are always available for buying and selling.

Launchpad

XMEME will enable the future launch of new meme coins from its own **100%** blockchain-based launchpad platform. A significant **10%** of **XMEME** tokens will be locked for the Launchpad platform, which will be used for financing and promoting new meme coins. Projects will be listed based on votes from every **XMEME** token holder, making the token indispensable within this ecosystem. Thanks to the Launchpad, **XMEME** will gain exposure to all memes launched through it without the need to purchase them from the market.

Crew

Project **TEAM** will retain only **5%** of **XMEME** Supply, which will be gradually released to provide full support to the project until achieving full **decentralization**, when project will be governed by the **community**.

Presale

The sale of **65%** supply will start and end at a price of **\$0.004**, fair for every buyer. After the **3-month PreSale** concludes, the remaining tokens will contribute to the liquidity pool in the decentralized staking mechanism. Tokens will be released over the next **5 years** proportionally to the **XMEME** pool holdings. Funds from the presale will be used **100%** for the project's development and ensuring token **liquidity**.

Staking&Buyback – As Advertising

Promotion of cryptocurrency projects is often the most challenging part, right after the project's development itself. Within the first **3 months** of the project's launch, a centralized application will be launched, enabling staking with two options, offering a **3% reward**:

1. Buyback funded by project funds with **7% commission**, where **5%** It will contribute to the project's turnover pool and **2%** will be permanently locked for liquidity purposes.
2. Further **staking** with a growing reward pool.

XMEME project has the potential to be a **game-changer** in the next crypto bull run. The project offers investors easy and convenient access to a wide range of meme coins, which have the potential for significant growth, without the need to search and risk investments in multiple different projects. One token provides exposure to the entire world of meme coins.

Staking – After Buyback

After the Buyback concludes, an additional contract will be deployed specifically for XMEME staking. **Liquidity** for XMEME from staking will be provided from realized profits through smart contracts responsible for meme coin trading and their proportions.

Benefits

Easy Access to Meme Coins: XMEME makes it easy for investors to access potential gems. Investors no longer need to wonder whether to buy DOGE, PEPE, or SHIBA because by holding XMEME, they have exposure to all of them.

Increased Liquidity: Project can contribute to increased **liquidity** for meme coins. As the project gains popularity, more people will be interested in buying and selling XMEME tokens.

Profit Potential: Meme coins have the potential for significant growth. XMEME can provide investors with the opportunity to profit from these increases.

Project will strive for complete **decentralization** to become independent of influences and authors, thus emphasizing buyback as a form of decentralized advertising of units.

Fair-Play: Airdrop will be distributed proportionally to all users based on their contribution. The calculation mechanism will adhere to the original principles of cryptocurrencies.

Risks

Of course, every cryptocurrency project, including XMEME, comes with certain risks. Here are a few of them:

Risk Associated with Meme Coins: Meme coins are highly volatile and can experience rapid price fluctuations.

Project-Related Risk: The XMEME project is still in **development**, and there is a risk that it may not achieve its goals, primarily depending on the community being built..

XMEME issuance and distribution will be conducted through **crowdfunding**. Investors may face risks during the crowdfunding process, including but not limited to fund security and the project's inability to meet expected goals. Investors should carefully assess the investment amount and understand the associated risks.
